## Step 1 -Install the docking station

(Water depth shall be at 1.2m (4ft) least and avoid any steps, sitting bar and light under the installation area.)
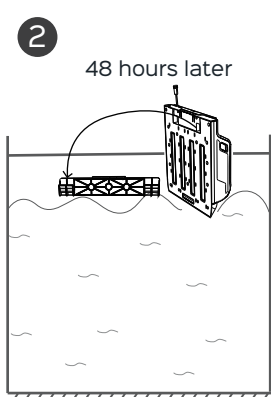

1

Hook Back Side

20mm(0.8in)

2

48 hours later

3

3.5m (11.5ft)

- Take out three included tapes and put them onto the back of the hook.
- Please paste the hook on the area 20mm (0.8in) above the waterline, ensuring that the area is flat, dry, and free of dirt.
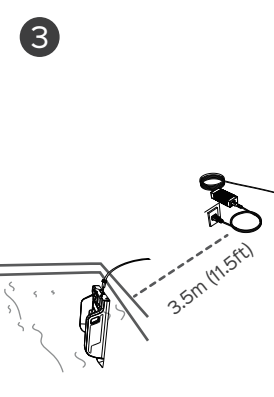

- Hook the docking station after the hook being cured for at least 48 hours.
- During curing, please ensure that the hook bears no weight.

- Connect and stretch out the charging line.
- Plug the adaptor into a power supply.

Step 2 -Charge the device

4

5

6

Fully Charged!

- Turn on the device and put it into the pool vertically.

- The device will keep static in the pool for 20 seconds to calibrate itself.
- After calibration, press 🏠 button to call the cleaner back to the docking station.

- Start to fully charge itself automatically

⚠ No charging devices on shore using docking station.
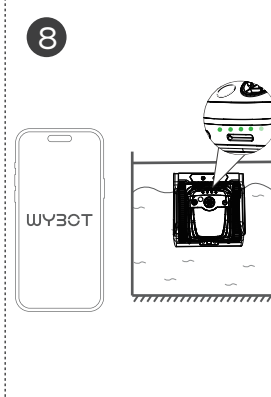

Step 3 -WYBOT App setting& mode selection

(If you do not need presetting, you may skip this step)

7

① [QR code]

② Google Play / App Store

8

9

- Customize your cleaning mode via App when the robot is in the pool.

or

- Please download WYBOT from the Google Play or App Store.
- Register your account as per App direction.
- Enable your mobile phone Bluetooth.

- Open your app and search WYBOT S2 Pro When it is charging (green light) on the docking station.
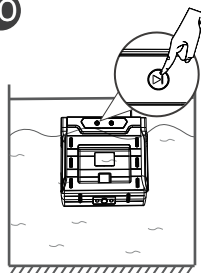

- Select a mode via the toggle
- Either way is workable.
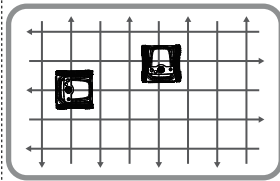

Step 4 -Start cleaning

⑩

- Press the ▷ button to start the pool cleaning.

or

- Or, click the *start cleaning* button on the App to start cleaning.

⑪

- The cleaner begins to clean walls, floor and waterline as default or your set through App.

⑫

- You can control the cleaner remotely and complete the specific area cleaning via the App.
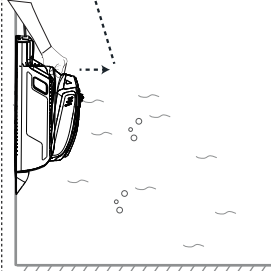

Step 5 -Removal from the pool

⑬

- The device will automatically move to the docking station when finishing cleaning or battery is low.

⑭

- You can also call the cleaner back to the docking station by pressing the button ⌂.

⑮

- Remove the cleaner from the docking station and power it off.

Step 6 -Cleaning the filter

⑯
a b
c d

- Cotton foam is an auxiliary filter to help trap the fine dirty particles. Recommend to use it for floor cleaning. Please do not install it when the pool water is heavy dusty, it may influence the operation of the cleaner.
- You should clean the filter after use. Insufficient cleaning may influence pool cleaning effect.
